

Product Name: Speed Hump

Description: Our Speed Humps reduce traffic speed to 10-16 mph. Speed humps help to slow cars and trucks, but are friendly to emergency vehicles. They are made from recycled tire rubber making them an environmentally friendly option. This product is the perfect option for slowing traffic in residential areas, apartment complexes, hospitals, school zones, shopping malls, and parking lots. The addition of speed humps can also lower insurance premiums for parking lot owners. The speed humps are striped with highly reflective yellow pavement tape making them easily visible at night.

These speed humps are ideal for use in any outdoor application as they are resistant to rotting, warping, chipping and cracking. The parking bumps are UV resistant and also resist damage caused by oil, moisture and extreme changes in temperature. They are removable, stackable, reusable and storable making them not only long lasting but also cost efficient.

Options Available: The speed humps come as a modular unit. Each modular unit is 35.5”(W) x 19.5”(L) x 0-2.5” (H). Each modular end cap is also 35.5”(W) x 19.5”(L) x 0-2.5” (H). Divide the total number of desired inches for coverage by 19.5”. This will calculate the needed number of modular units. The modular units allow for easy coverage of any size space. Each unit and end cap is 36lbs.

Installation Recommendations: Installation Instructions: This light-weight product is easy to install as each unit can be lifted by one person. Install the modular unit by connecting the tongue-in-groove system. Each unit also comes with a hardware kit. Although end caps are not required, they are recommended as they help maintain the structural integrity of the speed bump if drivers repeatedly attempt to go around the ends of the speed humps. Atheistically speaking, the end caps also add a nice finish to the end of the speed hump. These humps can be installed on any surface including dirt roads and driveways.

Additional Info: There is no minimum order for this item. Place your order today and your speed humps will ship tomorrow. Consider the installation of speed bump signs to alert drivers.
