

## Re-Bouncer & Delineator Posts

Flexible Re-Bouncer and Delineator Posts are ground Mounted plastic posts with or without reflective sheeting that are Used to delineate roadsides, interchanges, and other areas in Which safety is a concern. They can also be used as effective tools for marking Traffic lines in and around warehouse facilities, hospitals, and schools. Their Durability is remarkable as their sole purpose is to maintain structure and Visibility even after being subjected to continual from vehicles. Flexible Re-Bouncer posts are designed to withstand multiple impacts, limit damage to the Impact vehicle and alleviate the potential injury to vehicle occupants. Flexible Re-Bouncer posts are often installed in areas where space is Limited but Visibility is important.

### Installation Options:

- Butyl Pad Installation- This method is the more common method of installation. Butyl pads are sold as individual precut squares, commonly in 4"x4" or 8"x8" sizes. The butyl pads are composed of a double sided adhesion compound, which involves a simple peel and stick theory of installation. \*\*Please be sure that the surface area is clean and dry prior to installation.
- Two Part Epoxy Installation- This process involves the blending of Epoxy (parts A and B) and then painting the mixture on to the installation surface allowing the compound to fuse the post base with the floor surface. .

### Recommended Applications:

- Gore Areas
- Lane Channalization
- Traffic Director

### Recommended Application Locations:

- Schools
- Hospitals
- Neighborhoods
- Roadways
- Warehouse Facilities

### Sheeting Options Available:

- No Sheeting
- (2) 3" Reflective Bands
- (2) 4" Reflective Bands

### Available Sizes:

18" 28" 36" 39" 42"
